New Museum of Contemporary Art
New York, NY

New sletter

Nestled on the street once famous for flophouses and mayhem, the New Museum floats above the Bowery as a series of shifting rectangular volumes, as unique and astounding as the art it houses. The \$64 million capital improvement program included the use of a braced-frame steel system using the walls themselves as story-deep trusses and an interior exhibition area column-free, light and airy – feats only steel could accomplish.
